Airtel turbo charges its network in Jammu-Kashmir & Leh Ladakh for superior voice, data connectivity

STATE TIMES NEWS
JAMMU: Bharti Airtel ("Airtel"), one of India's leading telecommunications service providers, on Saturday, announced that it has completed the deployment of the additional spectrum it acquired in July 2024.

The deployment of additional 5MHz on the 2100 band and additional 3.8Mhz on the 900 band will give a boost to Airtel's 5G/4G network capabilities which, in turn, will improve and enhance data speeds and provide significantly better coverage inside homes and buildings both in urban and rural areas.

The deployment of additional spectrum is now complete and as a result customers across Jammu-Kashmir & Leh Ladakh etc. will enjoy an elevated quality

of service both on voice and data. The deployment will also allow Airtel to offer wider coverage along the highways and rail routes as well as increase its footprint in rural areas as the demand for connectivity continues to rise exponentially.

Adarsh Verma, COO, Jammu and Kashmir, Bharti Airtel, said, "Airtel's commitment to superior network performance is unwavering. With the integration of this new spectrum, customers across both the Union Territories can now enjoy enhanced call connectivity, faster data speeds and an overall improved performance. We remain committed to Jammu-Kashmir & Leh Ladakh and will continue to invest in technologies that will help elevate service expe-

rience for our customers."

Bharti Airtel secured 97 Mhz of spectrum at the recently concluded Spectrum Auction. It not only re-acquired the expired spectrum holdings but also expanded its Sub-GHz spectrum and efficiently consolidated its fragmented spectrum blocks into continuous spectrum.

Airtel, to its credit, holds the largest pool of mid-band spectrum. With its diverse spectrum holdings across the 900, 1800, 2100 and 2300 bands, the company is well positioned to serve the growing demand for high-speed data services with 5G and 4G networks.

It has also recently started the re-farming of mid-band spectrum for 5G to meet the growing data demands.
