Poem — Mother

'Word mother' looks too little enough;
While as her sacred duty is always forgiving .
There exists an ocean of love in her eyes;
I am lucky enough to have a mother.

In whose her lap keeping my head;
I forget all-about my awe & great fear.
Semi-gods too bow their heads to worship mother;
I too worship to her existence forever.

Mother is invaluable moonstone among all pearls & jewels;
That may be gotten hardly by a great effort and trial.
How should I worship her existence eulogistically ?

Her smile is like that of fragrance of sweet flowers .

Whenever she loves me with an unconditional love;
Having thrilled and joyed with dancing my mind.
She may love more than love of brother;
She may love more than care & affection of sister.

She is too happy to be in my happiness;
I may not distress and grieve to such a mother.

Tara Chand Bhagat,
(Talab Tillo, Jammu)

Poem — Today is the only day

Wherever you reach today, Whatever you teach today,
Forever will be for tomorrow's yesterday.

Today is the only day,
It's your choice you rest, explore or play.

Hidden thoughts will expire forever after today,
Expressed thoughts will only play, Your footsteps the next day.

You can't even say how long you will live today,

Don't be egoistic that tomorrow is also your today's day,
It's neither your good nor bad whether you are
provided a bonus day.

Life may change some people today,
Some people might think to change life one day,
One day might exist or not, at least don't waste the
most plausible day that is today.

Sahaj Sabharwal.

CAREER AID

Cartography

Cartography is the art and science of making and using maps, which are symbolic representations of geography. A professional who is skilled in drawing various kinds of maps and charts is known by the name Cartographer or a Map Maker. Cartographers are part of a larger occupational group called mapping scientists. A cartographer is involved with the scientific, technological and artistic aspects of developing and producing maps. Cartographers use data collected from surveys, aerial photographs, satellite images, and other sources to create maps, charts, and drawings of the Earth's surface.

Cartographers develop maps for a range of clients. This can be military maps to geological charts used by industries, as well as everyday maps detailing roads and footpaths for tourists or travelers. Cartographers collect, analyze, and interpret both spatial data—such as latitude, longitude, elevation, and distance—and nonspatial data—for example, population density, land-use patterns, annual precipitation levels, and demographic characteristics. Maps may be prepared either in graphic or digital form with information from satellites, light-imaging detection and ranging (LIDAR), aerial cameras and other geodetic surveys and remote sensing systems. A Cartographer's role varies widely from the development and design of geographical information to more strategic and technical work. For centuries, maps have been essential tools to understand and navigate through the world.

Eligibility

Most Cartographers earn a bachelor's degree or diploma in Cartography or a similar field such as surveying, geography, geology, engineering, computer science, earth science or a physical science.

Additional classes in mechanical drawing, drafting, geometry, trigonometry, algebra etc helps aspirants who wish to

take up cartography as a career. Cartographers must have a sense of design to understand detailed photographs and drawings. Cartography is far more than just drawing maps, it involves a lot of research, study, and mathematical ability as well. To be an expert cartographer, one has to be very hard working and dedicated. Cartographers must be precise and accurate, have good interpersonal skills, and be able to visualize objects, distances, sizes, and other abstract forms. As a cartographer you need to have patience, as it may take many months to complete a single sheet map. Accuracy and attention to detail with a methodical and neat approach to work is prerequisite for this career.
